

Aaryan Sinha

AI Engineer & Full-Stack Architect · Building AI-native products (Devovia · Maestro · AI-Trader) · LLM Apps · Agentic AI · Real-time Systems

aaryansinha16@gmail.com · +91 8905780547 · Ahmedabad, Gujarat, India · devovia.com · [github/aaryansinha16](https://github.com/aaryansinha16) · [linkedin/aaryansinha16](https://linkedin.com/in/aaryansinha16) · [medium/@aaryansinha16](https://medium.com/@aaryansinha16)

PROFESSIONAL SUMMARY

I build AI-native products, not CRUD apps. AI Engineer and Full-Stack Architect with 5+ years of production engineering experience, specialising in LLM application development, agentic AI systems, and real-time collaborative infrastructure. Currently shipping multiple production SaaS products spanning autonomous AI agents, developer tooling, and ML-driven trading systems. Contracted by OpenAI & Meta as a JavaScript/TypeScript domain expert to directly improve LLM code-generation quality. Strong track record of independently owning full product lifecycles, including architecture, implementation, CI/CD, and client delivery. Open to remote-first roles globally in AI engineering or full-stack AI product teams.

TECHNICAL SKILLS

AI / LLM: Agentic AI Development, LLM Application Development, LangChain, RAG, Prompt Engineering, OpenAI API, Hugging Face, AI Agents, Tool-calling

Languages: TypeScript, JavaScript (ES2022+), Python, SQL

Frontend: Next.js, React, Svelte, Tailwind CSS, Shadcn/ui

Backend: NestJS, Node.js, Express, FastAPI, GraphQL, REST, WebSockets, Socket.IO

Real-time: Yjs (CRDT), Tiptap, WebRTC, collaborative editing

Databases: PostgreSQL, TimescaleDB, MongoDB, Redis, Neo4j, MySQL, Supabase

ORM / Query: Prisma, TypeORM, Mongoose

Cloud & DevOps: AWS (Lambda, EC2, S3, SNS, SQS, EventBridge, Cognito), Docker, GitHub Actions, Railway, Vercel, Turborepo, CI/CD

ML / Data: XGBoost, time-series analysis, backtesting engines, walk-forward validation

Payments: Razorpay, Stripe, Mollie

Architecture: System Design (HLD/LLD), event-driven, microservices, multi-tenancy, monorepo

WORK EXPERIENCE

Engineering Lead, Eigenlytics Solutions

Apr 2026 - Present

Eigenlytics Solutions · AI product engagement with Luxia (Italy-based AI startup) · Remote

- Lead engineer on Luxia's AI product (Italy-based AI startup), owning architecture, delivery, and technical direction across the frontend, backend, and AI/LLM layers.
- Ship production LLM and RAG features plus the secure backend services behind them; set engineering standards through system design and code review.
- Own deployment, monitoring, and quality across a TypeScript + Python stack in a live product environment.
- **Stack:** TypeScript, Next.js, NestJS, Python, FastAPI, LLMs, PostgreSQL, AWS, Docker.

AI Prompt Engineer (Contract)

May 2025 - Aug 2025

OpenAI / Meta · Freelance · Remote

- Contracted as a JavaScript/TypeScript domain expert to train and evaluate large language models, one of a select pool of expert contractors chosen for JS/TS code quality assessment.
- Wrote expert-level code completions, reviewed model outputs for correctness, and designed evaluation rubrics for complex JS/TS tasks including async patterns, type systems, and framework-specific idioms.
- Work fed directly into production model training pipelines, contributing to measurable improvements in LLM code-generation accuracy for JavaScript/TypeScript tasks.

Full-Stack Developer, Paisaeasy

2025 - 2026

Paisaeasy (paisaeasy.com) · Personal finance & banking platform · Remote

- Built secure, compliance-grade financial business logic, owning features from architecture through deployment and testing in a live production environment handling real money flows and sensitive user data.
- Implemented core banking and finance flows: KYC onboarding, transaction ledger, account statements, and Razorpay-based collections and payouts, with idempotent, fully auditable transaction handling.
- Hardened the platform end-to-end: encryption of sensitive data in transit and at rest, role-based access control, secure JWT session management, and strict input validation to meet financial-grade security standards.
- Integrated multiple third-party services (payment gateway, OAuth providers, and KYC/verification APIs), cutting integration turnaround to under 2 days per provider.

- **Stack:** React, Next.js, NestJS, Node.js, PostgreSQL, Prisma, Razorpay, AWS, Docker.

Software Engineer (Full Stack), Brainerhub Solutions

2023 - Apr 2026

Brainerhub Solutions · Ahmedabad, India · On-site

- Solo-owned 3+ concurrent client projects end-to-end (requirements → system design → implementation → deployment) with zero handoff dependency, across React, Next.js, NestJS, PostgreSQL, RTK Query, and Shopify stacks.
- Built an ad-analytics dashboard aggregating data across 4 ad platforms (Google, Meta, TikTok, Snapchat) with real-time CPM/CPC/CTR calculations and SQL-based insight queries.
- Led technical onboarding for new engineers and cross-team PR reviews; earned team-lead responsibilities and a 'Rising Star' award within the first year.
- **Stack:** React, Next.js, NestJS, TypeScript, PostgreSQL, Prisma, AWS, Docker.

Freelance Full-Stack Developer

Nov 2018 - Mar 2023

Self-employed · Remote

- Delivered 12+ production web applications for international clients over 4+ years, full ownership from requirements through architecture, deployment, and post-launch support.
- Maintained live client products including krislineconsulting.com. Key work: real-time features (Socket.IO), payment integrations (Razorpay, Mollie, Stripe), and Shopify GraphQL APIs.

Educator, Personal Finance & Stock Market (Internship)

Jan 2021

AcadBoost · India · Remote

- Delivered personal finance and stock market educational content for student audiences.

KEY PROJECTS

AI-Trader, AI-Powered Algorithmic Trading System (NSE F&O)

Mar 2026 - Present

github.com/aaryansinha16/AI-trader

- Dual-model ML architecture: macro model (market regime detection) + microstructure model (tick-level order flow) for NIFTY/BANKNIFTY intraday options, trained on 6 months of 1-minute candle data + 5 days of tick data.
- 18 technical indicators + order flow features. Walk-forward validation to prevent overfitting. Risk controls: 1% max loss per trade, 5% daily cap, enforced at execution layer.
- Institutional options flow analysis + regime-adaptive strategy switching. Automated execution via Zerodha Kite API. Full open-source codebase on GitHub.
- **Stack:** Python, TimescaleDB (time-series), XGBoost, FastAPI, Docker. Pipeline: data ingestion → feature engineering → model training → live execution.

hiLuxia, Conversational AI Platform (Avatars, RAG & Chatbots)

2026 - Present

- Conversational AI platform with chatbots and interactive AI avatars. Built the frontend chat and avatar experience: streaming responses, avatar rendering, and real-time messaging used by end users.
- Engineered the RAG backend behind the assistants. Web crawlers and data-extraction pipelines ingest and structure source content, which is embedded and retrieved to ground LLM responses.
- Owned backend security: authentication, role-based access control, and secure handling of user and crawled data across the platform's APIs.
- **Stack:** Next.js, React, TypeScript, NestJS, Python, FastAPI, LLMs (RAG), vector search, Playwright (crawlers), PostgreSQL.

Maestro, Autonomous Multi-Project Engineering Orchestrator

2026

github.com/aaryansinha16/Maestro

- Server-side orchestration layer that turns Claude Code into an autonomous workforce, scheduling time-bounded coding sessions across multiple GitHub repos in parallel and opening PRs for review (quality over activity, never noise commits).
- Quality-gated, PR-first workflow: every session runs tests, lint, and type checks before a PR opens; failed gates trigger a one-shot fixup turn, and clean runs can auto-squash-merge.
- Built a cron-driven scheduler with hot-reload, 6 layered skip rules, 5-strike auto-pause, an in-memory job queue with SQLite persistence, and per-project monthly cost budgets enforced from Claude session output.
- **Stack:** TypeScript, Hono, SQLite, Vite + React, node-cron, Octokit (GitHub API), Docker, pnpm + Turborepo monorepo.

Devovia, Developer Command Center

2025 - Present

devovia.com

- Developer productivity hub with real-time collaborative sessions (Yjs CRDT + Tiptap), Google Docs-style multi-user editing with conflict-free resolution at the document layer.

- Runbooks: drag-drop programmable operational workflows with automated execution, live log streaming, and full audit trails. Shipped Phase 1 in under 2 weeks as a solo engineer.
- AI command interface (Supercharged mode): natural-language input mapped to platform actions (e.g. 'create project and add teammate' → executes directly), with AI-generated deployment summaries to Slack.
- **Stack:** Next.js 15, NestJS, Prisma, PostgreSQL, Yjs, Tiptap, Turborepo, Railway, Vercel, Tailwind. GitHub Actions CI/CD; GitHub OAuth + JWT auth.

AIFlowo, Autonomous AI Web Agent

2025 - Present

github.com/aaryansinha16/aiflowo

- Agentic AI platform that executes real-world digital tasks autonomously, not just chat. LLM-driven intent parser → multi-step task planner → tool selector → execution engine with structured permission layers and safety guardrails.
- Capabilities across 5+ task categories: complex form automation (government, admissions, passport), automated job applications with resume/cover letter generation, flight search + booking, and social media posting with media editing.
- Real browser automation (Playwright) with logs, screenshots, and OTP-aware flows. Containerised workers via Docker, Redis queues for async handling, Razorpay subscription tiers + strategy marketplace.
- **Stack:** Next.js, NestJS, FastAPI, Python, Playwright, LLMs, Redis queues, Docker, TypeScript.

JobKaptan, AI-Powered Job Search & Application Platform

2026

github.com/aaryansinha16/seeker

- AI job-search platform that continuously discovers roles across multiple ATS / job boards, scores fit against a candidate's profile with an LLM, and queues tailored applications for human approval before sending.
- ATS polling + ingestion pipeline aggregates and de-duplicates postings; LLM-based fit-scoring ranks each role against the candidate's resume and stated preferences.
- Human-gated outreach queue auto-generates a tailored resume and cover letter per role, with a mandatory review and approve step before any application or outreach is submitted.
- **Stack:** TypeScript, Next.js, NestJS, Python, LLMs, PostgreSQL, Redis.

TripKaptan, AI Travel Platform

Jan 2026 - Mar 2026

- Full-stack travel agency platform: trip listings, AI trip generator, vendor onboarding, booking + payments (Razorpay), and a KPI dashboard for admins.
- Multi-entity vendor model (hotels, guides, cabs) with booking calendar and role-based access for vendors, admins, and users. Stack: Next.js, NestJS, Prisma, PostgreSQL, Razorpay.

Serverless Event-Driven Notification System

2024

- Multi-tenant notification engine supporting 4 delivery channels (email, SMS, push, in-app) with per-tenant routing, built for SaaS companies.
- Event-driven architecture using AWS EventBridge + SQS for reliable async delivery; serverless and pay-per-invocation. Stack: AWS SNS, SQS, Lambda, DynamoDB, EventBridge, Node.js, React.

Multi-Tenant Headless CMS (Contentful Alternative)

2024

- Headless CMS with per-org RBAC, asset optimisation (S3), a GraphQL API with Redis caching, and a subscription-based monetisation model.
- AWS Cognito for multi-tenant auth; Lambda for on-demand asset processing, a self-hosted alternative to Contentful for cost-sensitive teams. Stack: Next.js, NestJS, GraphQL, PostgreSQL, Redis, AWS.

EDUCATION & CERTIFICATIONS

Masai School, Full Stack Web Development

Mar 2022 - Nov 2022

Intensive full-time engineering program: JavaScript, React, Node.js, DSA, System Design.

Amity University, BCA (Bachelor of Computer Applications)

Aug 2020 - Mar 2022

Maheshwari Public School, Senior Secondary (PCM, Kota)

2019 - 2020

Certifications: Full Stack Development (Masai School) · Basic to Advanced DSA (GeeksforGeeks) · Responsive Web Design (freeCodeCamp) · Professional & Live Skills (Amity University)

Open to remote roles globally, no timezone restrictions · Writing on AI engineering: medium.com/@aaryansinha16 · Shipping daily: github.com/aaryansinha16
